AI-Assisted Development

Practice Worksheet | Add a count option

Name: _____ Date: _____

Start from the completed command-line note search. Add --count so the command prints the number of matching notes. Without the flag, preserve the existing output. Change search_notes.py and its README usage note only.

1. Intended behavior and behavior to preserve

2. Context and constraints I will give the assistant

3. Plan I accepted before allowing file edits

4. Changed files and anything unexpected

5. My acceptance decision and reason

Checks and Review

Run the commands on your actual working copy. Write the observed result and exit status. On Windows replace python3 with py -3.

Command / check	Expected	Observed / exit
python3 search_notes.py "git" --count	1; exit 0	_____ _____
python3 search_notes.py " GIT " --count	1; exit 0	_____ _____
python3 search_notes.py "missing-note" --count	0; exit 0	_____ _____
python3 search_notes.py " " --count	0; exit 0	_____ _____
python3 search_notes.py "git"	Git basics; exit 0	_____ _____
python3 search_notes.py "missing-note"	No matching notes.; exit 0	_____ _____
python3 search_notes.py	Usage; nonzero exit	_____ _____
python3 check_search.py	7/7 checks; exit 0	_____ _____

Review before accepting

[ ] Only the permitted files changed.
[ ] The implementation reuses find_notes and notes.json.
[ ] I inspected new/untracked files as well as the diff.
[ ] I ran every check and investigated unexpected results.
[ ] I can explain why I accepted the result.

If you get stuck

Check the working folder and selected source stage first. The original Starter intentionally fails its padded-query check; the reviewed fix and completed CLI should pass all seven. Read the course troubleshooting article before comparing with the supplied Reference Solution.
